Highly active recombinant CD3 monomers & heterodimers

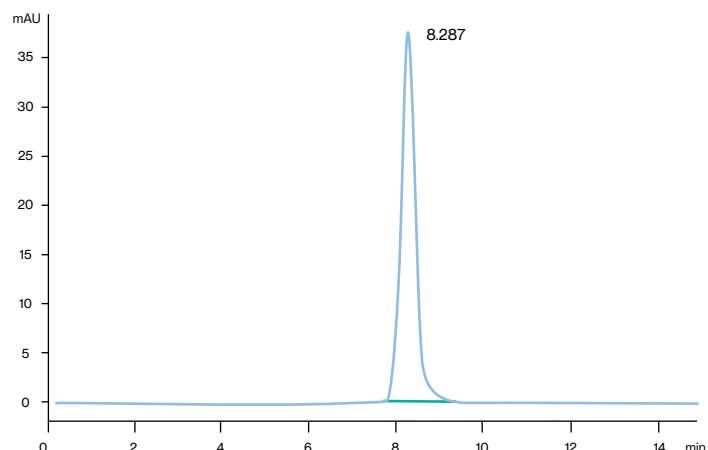

High Protein Affinity

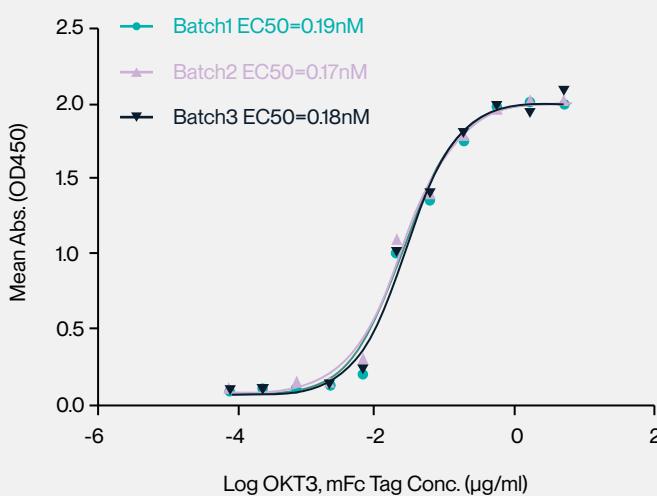

Through rigorous experimentation using ELISA and SPR analysis, we methodically assessed the potency of our CD3 heterodimers, notably exemplified by CD3E/G-His Tag and CD3E/D-His Tag. These investigations have substantiated the high protein affinity of these CD3 proteins.

Equal Expression of Subunits

A proprietary design, expression, and purification system ensures the two subunits of the heterodimers are expressed in equal proportions with greater than 95% purity, verified by SDS-PAGE and SEC-HPLC.

Stability

The robustness of our CD3 proteins is demonstrated by their high batch-to-batch consistency and long-term stability, validated via ELISA. Our CD3 proteins offering a dependable foundation for a spectrum of research and clinical pursuits within the realms of immunology and biotechnology.

Cluster of Differentiation 3 (CD3)

TCR-Complex showing TCR- α and TCR- β chains with associated CD3 γ , δ , and ϵ subunits.

Cluster of Differentiation 3 (CD3) is a protein expressed on the surface of T cells consisting of 6 transmembrane peptide chains. Our CD3 proteins contain a proprietary design and purification system to ensure accurate expression of heterodimers and equal expression of subunits.
